January 2011

THYROID GOLD™ -- THE NEW THYROID REGISTRATION SYSTEM

Since January 2009, we have performed over 15,000 tests with our novel 'green' thyroid diagnostics.

We consider ourselves to be the world's leader in this field, and are therefore setting up our own canine thyroid registration system.

A **THYROID GOLD™** certificate will be issued after obtaining normal passing thyroid results consisting of T4, freeT4, T3, freeT3, TgAA (Hemopet's patented Thyroid 5 Profile) to confirm and identify those dogs that are phenotypically normal for breeding programs. The lab data gathered is archived into our database of patients with or without the genetic disease – autoimmune thyroiditis.

We promise to,

- not waste your money.
- provide you with interpretations based on our patented breed type, age and sex data base.
- not pollute the environment with radioisotopes or other unfriendly chemicals.
- always give you results that you can rely on.

So,

- we will not test for TSH; as it has limited predictive value for hypothyroidism in dogs
- we will report to you promptly within 2-4 days of receiving your sample
- we will use our patented, exclusive 'green' technology

HEMOLIFE, the Diagnostic Division of Hemopet, provides the most comprehensive diagnostic profiles for detecting and interpreting autoimmune thyroiditis and hypothyroidism, with reference ranges based on age, sex, breed, and activity. No other diagnostic laboratory offers this technology or provides clients with the detail, personal assessment, and recommendations offered by Dr. Dodds and her staff.

Please join in on the benefits of this new technology !

Jean

W. Jean Dodds, DVM
