

# 2013-2017 Feline Vaccination Protocol

W. Jean Dodds, DVM  
Hemopet / NutriScan  
11561 Salinaz Avenue  
Garden Grove, Calif. 92843

Note: The following vaccine protocol is offered for those cats where minimal vaccinations are advisable or desirable. The schedule is one Dr. Dodds recommends and should not be interpreted to mean that other protocols recommended by a veterinarian would be less satisfactory. It's a matter of professional judgment and choice.

## 8-9 Weeks Old

Panleukopenia (feline parvovirus), Calicivirus, Rhinopneumonitis Virus (feline herpesvirus-1) [FVRCP]

## 12-13 Weeks Old

Same as above

## 24 Weeks or Older (if required by law)

Rabies (e.g. Merial Purevax™, recombinant)

## 1 Year

FVRCP booster (optional = titer)

## 1+ Year

Rabies, same as above but separated by 2-3 weeks from FVRCP

Perform vaccine antibody titers for panleukopenia virus every three years thereafter, or more often, if desired. Vaccinate for rabies virus according to the law, except where circumstances indicate that a written waiver needs to be obtained from the primary care veterinarian. In that case, a rabies antibody titer can also be performed to accompany the waiver request. Visit Rabies Challenge Fund.
